

# SMOOTH MOVE

**GORE® INTERING®**  
Vascular Graft

*Together, improving life*

The lowest-profile, radially supported ePTFE graft available for vascular access

An option that offers all the benefits of a ringed graft – without the rings

Kink and compression resistance due to ePTFE radial support concealed within the ultra-smooth graft wall

- No-profile radial support
- All-ePTFE unibody graft
- Smooth luminal surface
- Cut and suture anywhere

## No-profile radial support

The integrated radial support within the GORE® INTERING® Vascular Graft reduces the cross-sectional area by approximately 24% compared to an externally ringed graft while maintaining the same luminal diameter

### All-ePTFE unibody graft

# Cut and suture anywhere

- Bevel cut of the GORE® INTERING® Vascular Graft

- Cutting a window in the GORE® INTERING® Vascular Graft

- Window graftotomy in the GORE® INTERING® Vascular Graft

- Creating end-to-side anastomosis between GORE® INTERING® Vascular Grafts and GORE-TEX® Suture

---

Smooth luminal surface of the ePTFE radially supported section of the GORE® INTERING® Vascular Graft

Completed end-to-end,  
GORE® INTERING® Vascular Graft-to-vein  
anastomosis with GORE-TEX® Suture

One-year primary patency  
GORE® INTERING® Vascular Graft  
**73% (n = 86)\***

Radial reinforcement at the anastomosis  
to maximize the anastomotic opening.

\* Thibodeaux LC, Reyes AA. Initial experience with an intrawall, radially supported expanded polytetrafluoroethylene graft for vascular access. In: Henry ML, ed. Vascular Access for Hemodialysis -IX. Los Angeles, CA.: W.L. Gore & Associates, Inc. & Bonus Books, Inc;2005:19:195-201.

# Combining the best

The GORE® INTERING® Vascular Graft combines the advantages of ringed and non-ringd vascular grafts with a unique design and wide array of features and benefits:

- Reinforced ePTFE
- Longitudinal extensibility inherent in GORE-TEX® STRETCH Vascular Grafts
- Integrated radial support that resists kinking and compression
- Diameter to diameter, up to 24% reduced profile, compared to an externally supported ringed or spiral graft
- Easier placement through a tissue tunnel compared to ringed vascular grafts
- The ability to cut and sew through the radial support anywhere along the entire length of the graft

The versatility of the GORE® INTERING® Vascular Graft lends its use to a variety of surgical procedures:

- Lower limb bypass; above- or below-knee reconstructions
- Extra-anatomic procedures
- Vascular access grafts

---

The GORE® INTERING® Vascular Graft can address a variety of clinical applications, which in turn may streamline operating room inventory and reduce carrying costs.
