**GORE® Molding & Occlusion Balloon**

# ALL YOU NEED IN ONE BALLOON

Optimize seal. Minimize risk.  
Enhance control.

The GORE® Molding & Occlusion Balloon is the one balloon you will need to seat and seal EVAR stent grafts with confidence.

Learn more at [goremedical.com/balloon](http://goremedical.com/balloon)

Designed through clinician collaboration to address the challenge of consistently achieving the best possible EVAR stent graft seal and temporary vessel occlusion.

## Optimize seal

Proven radial expansion force across the range of EVAR device sizes (10–37 mm).

## Minimize risk

Engineered with a 10 Fr low profile to reduce access-related complications.

## Enhance control

Designed for excellent pushability and trackability with uncompromised inflation/deflation time.

### Catalogue number: MOB37

- Balloon inflation range: 10–37 mm
- Balloon length: 4 cm (marker bands)
- Catheter length: 90 cm
- Wire compatibility: 0.035" 180 cm length
- Balloon catheter profile: 10 Fr

### Inflation table

#### Recommended inflation volume

Balloon diameter (mm)	Volume (mL)
10	2
20	7
30	16
37*	35

\* Maximum balloon inflation diameter.

CAUTION: The above balloon inflation chart volumes and diameters are only an approximate guide. Please see *Instructions for Use* on [goremedical.com/balloon](http://goremedical.com/balloon) for more information.

Force (N) is affected by the size of the constraining diameter. The larger the diameter, the lower the Force (N) a compliant balloon will exert on the inner wall of the constraining device (stent graft).

#### 10 mm constraining diameter

Max radial expansion pressure vs. contact length (m)

#### 28 mm constraining diameter

Max radial expansion pressure vs. contact length (m)

#### 37 mm constraining diameter

Max radial expansion pressure vs. contact length (m)

NOTE: As depicted by the graphs, MOB is designed to not lose its REF capability in larger diameters. No other compliant balloon tested was able to maintain its REF in larger diameters as well as the MOB.
